

SYSTEM REQUIREMENTS SPECIFICATIONS:

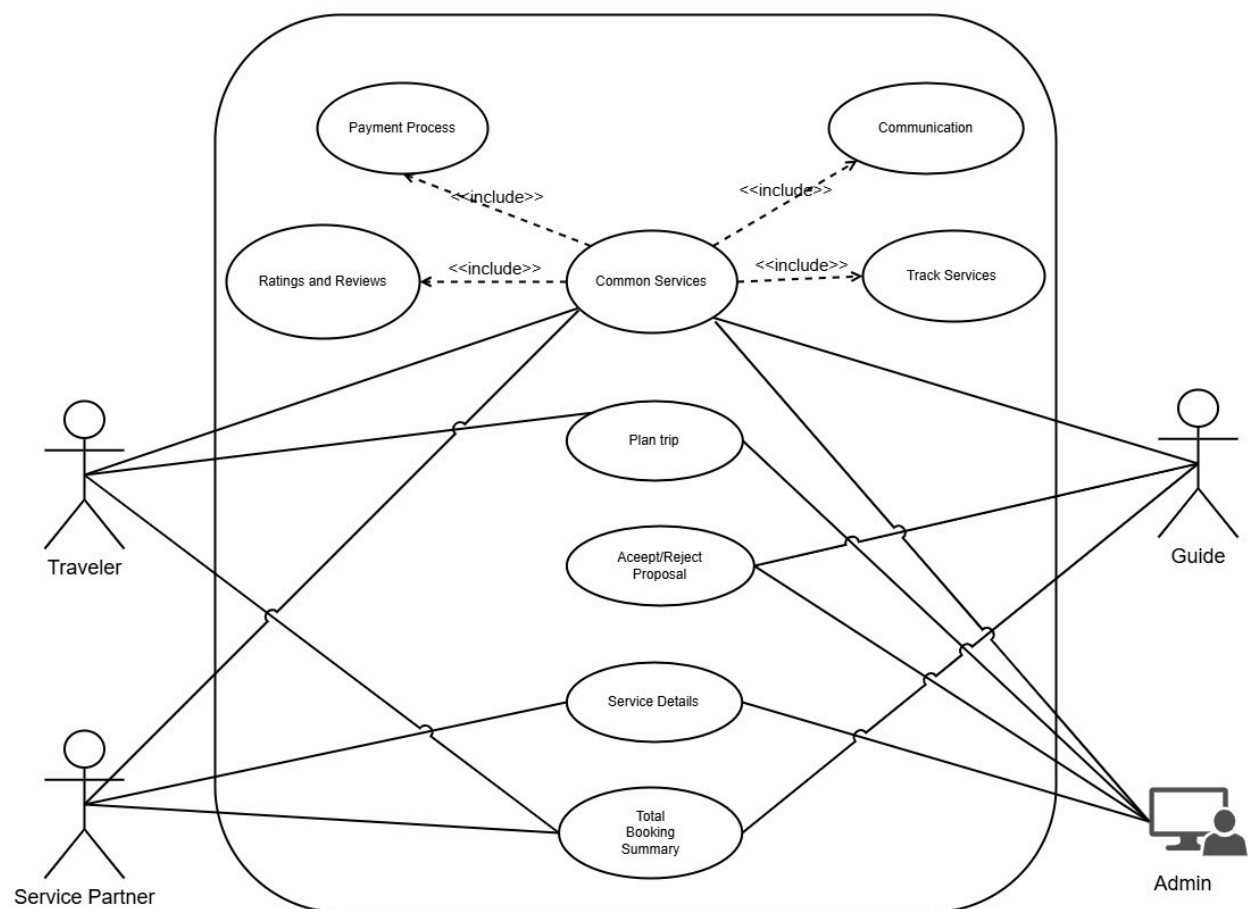

1. FUNCTIONAL REQUIREMENTS:

- The system should allow users to create an account, log in, and edit their details.
- Users should be able to search and book for flights, trains, buses, and hotels.
- Users should be able to cancel or change their bookings if plans change.
- The system should show the total cost of the trip, including taxes and discounts.
- The system should send booking details and updates through email or SMS.
- The system should suggest travel plans based on what the user likes and needs.
- Users should be able to change their preferences and get new travel plan suggestions.
- The system should show the full trip step by step, from start to end.
- The system should show which places are completed, ongoing, or upcoming, along with travel and stay details.

2. NON-FUNCTIONAL REQUIREMENTS:

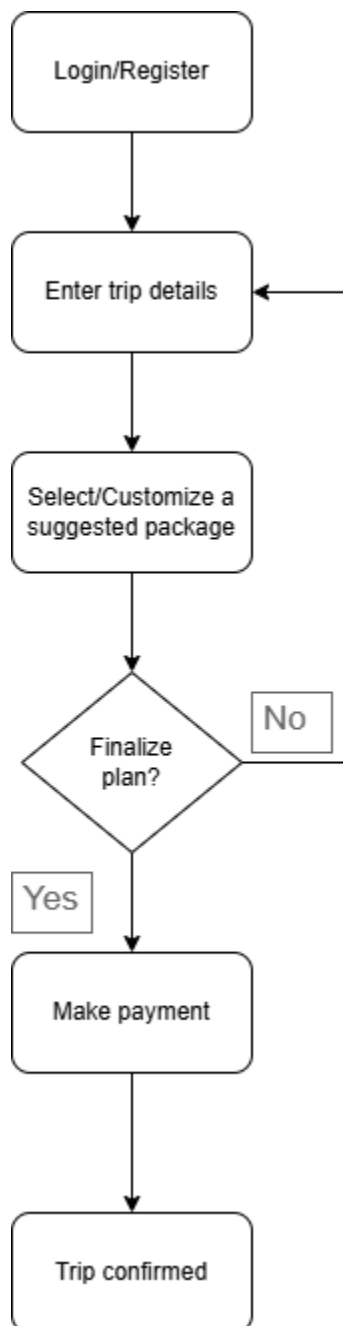

- Performance: Search results should take around 3 seconds and output packages from the model should take around 10 to 15 seconds based on the preferences.
- Scalability: The system should support the heavy traffic during peak seasons.
- Security: User data is encrypted(stored safely) and we provide a very secure authentication.
- Availability: system is available 24/7 with 98% proficiency.
- Usability:user interface is simple and easy to use for naive users.
